Broadlawns Medical Center Visitor Guidelines for Flu Season Removed

Effective today, Broadlawns Medical center will be ending our visitor guidelines for this Flu Season. Broadlawns Medical Center will resume our regular visitor's guidelines.

About Broadlawns

Broadlawns Medical Center is home to 1,000 employees and a 75-member physician staff working together to ensure quality care that is coordinated, compassionate and cost-effective. Broadlawns is more than a Polk County acute care, community hospital. Patients and their families benefit from the convenience and coordinated care of a medical campus that includes the main hospital, emergency, inpatient, outpatient, lab, radiology, mental health, specialty clinics, crisis team and other support services – all in one place.

Broadlawns accepts all forms of insurance and its approach to health care delivery systems and quality outcomes helped it earn a Level 3 rating through the National Committee for Quality Assurance (NCQA) – the highest achievable status possible for a Medical Home care delivery model.

Broadlawns takes a leadership position in teaching the next generation of health care professionals through its residency and fellows programs. In 1971 it became one of the first fully accredited Family Medicine Residency programs in the Midwest and has curriculums designed to meet all requirements of the residency review committee of the Accreditation Council for Graduate Medical Education (ACGME).
